# Introduction

Cara is a full-stack clothing e-commerce website designed to deliver a seamless and personalized shopping experience. It bridges the gap between modern fashion and intuitive digital retail.

## For Shoppers

Browse curated collections, discover styles, and shop with ease.

## For the Platform

Manage inventory, process orders, and engage customers efficiently.

## Our Goal

Simplify the online fashion journey — from browsing to checkout.

# Problem Statement

Online fashion shopping still faces significant friction points for both buyers and sellers:

## Poor Discoverability

Shoppers struggle to find clothing that fits their style and size preferences.

## Cluttered Interfaces

Most platforms overwhelm users with irrelevant products and ads.

## No Personalization

Generic catalogs fail to reflect individual taste or purchase history.

## Inefficient Management

Sellers lack streamlined tools for inventory, orders, and customer insights.

# Technical Details

Cara is built on a modern, scalable full-stack architecture designed for performance and maintainability.

## Frontend

HTML5, React.js for dynamic UI components, CSS for responsive styling and visual polish.

## Backend

Node.js and Express.js handling RESTful APIs, routing, and core server-side business logic.

## Database

MongoDB — a flexible NoSQL database for storing products, users, and order data.

## Authentication

JWT (JSON Web Tokens) for secure login, session management, and user verification.

# Key Features

## Product Catalog & Browsing

Browse curated clothing collections with filters for category, size, color, and price.

## User Authentication

Secure registration, login, and profile management powered by JWT.

## Cart & Checkout

Add items to cart, manage quantities, and complete purchases through a smooth checkout flow.

## Order Management

Track orders in real time with status updates for both customers and admins.

## Admin Dashboard

Manage inventory, add/remove products, and oversee users and transactions.

# Project Highlights — Login

The secure login screen offers a clean, minimal interface for returning users to authenticate quickly and safely.

## Authentication Flow

The login page features a minimal dark-themed design consistent with Cara's brand identity. Users authenticate via email and password, with JWT-secured sessions ensuring data protection.

### Email & Password Login

Standard credential-based authentication.

### JWT Token Security

Tokens issued on successful login for secure session handling.

### Register Redirect

New users are guided to the registration page seamlessly.

# Project Highlights — Register

New users can create an account in seconds. The registration screen captures essential information to personalize the shopping experience from day one.

## Register

## User Registration

The register screen maintains Cara's sleek dark aesthetic. Users provide a username, email, and password to get started. Input validation and error handling ensure a smooth sign-up experience.

### Username & Email

Unique identifiers for each user account.

### Password Hashing

Credentials are encrypted before storage for security.

### Login Redirect

Existing users are redirected to the login page with one click.

# Project Highlights — Core Platform

The main interface brings together product browsing, resume-profile matching, and a personalized planning experience — all in one cohesive dark-themed dashboard.

The screenshot shows a dark-themed web interface titled "Create Your Custom Interview Plan". Below the title is a subtitle: "Let our AI analyze the job requirements and your unique profile to build a winning strategy." The interface is divided into two main panels. The left panel, labeled "Target Job Description" with a "REQUIRED" tag, contains a text area for pasting a job description, with an example: "e.g. 'Senior Frontend Engineer at Google requires proficiency in React, TypeScript, and large-scale system design...'" and a character count "0 / 5000 chars". The right panel, labeled "Your Profile", has two options: "Upload Resume" with a "BEST RESULTS" tag and a "Click to upload or drag & drop" button (PDF or DOCX, Max 5MB), and "Quick Self-Description" with a text area for a brief description of experience. A note at the bottom of the right panel states: "Either a Resume or a Self Description is required to generate a personalized plan." At the bottom of the interface, there is a status bar showing "AI-Powered Strategy Generation • Approx 30s" and a prominent pink button labeled "★ Generate My Interview Strategy". Footer links for "Privacy Policy", "Terms of Service", and "Help Center" are visible at the very bottom.

## Custom Plan Generator

Users upload their profile or describe themselves, and the platform generates a personalized strategy — whether for shopping preferences, style planning, or outfits tailored to events.

- Upload profile or self-description input
- AI-powered personalized plan generation
- Clean, intuitive two-panel layout
- Real-time response and recommendations

# Future Scope

Cara is built to grow. The roadmap ahead focuses on intelligent features, broader reach, and a richer user experience.

## Mobile Application

A dedicated iOS and Android app for on-the-go shopping accessibility.

## AI Style Recommendations

Machine learning models that learn from purchase history to suggest outfits.

## Multi-language Support

Expand Cara's reach with localized content across multiple languages.

## Advanced Payment Gateway

Integration with UPI, wallets, and international payment providers.
